

August Kryś

Salesforce Industries Product Leader | AI-Native Builder | Founder / Operator

Detroit, Michigan | LinkedIn: [linkedin.com/in/augustkrys](https://www.linkedin.com/in/augustkrys) | GitHub: github.com/not2technical | Medium: medium.com/@akrys

Executive Profile

Salesforce product leader, founder/operator, and hands-on AI-native builder who turns undefined product opportunities into working systems, reusable assets, field-ready narratives, and adoption paths. I have led Manufacturing Cloud, Automotive Cloud, GenAI, demos, POCs, workshops, and technical enablement at Salesforce while continuing to build practical tools outside formal role boundaries. My differentiator is simple: I understand enterprise scale, but I build with startup speed.

How I Think

I care about practical systems over slideware.

I use AI to compress the distance between idea, specification, and execution.

I think in reusable patterns, not one-off artifacts.

I translate product capabilities through real domain knowledge, real workflows, and operating context.

I value speed, clarity, and technical leverage that creates real outcomes.

Operating Principles

- **Builder in Ambiguity:** Create structure through specs, prototypes, demos, POCs, and working systems.
 - **AI-Native Operator:** Use agentic workflows, spec-driven development, and local AI systems to compress the path from idea to execution.
 - **Domain + Product Translator:** Translate product capabilities through domain knowledge, real workflows, and business context.
 - **Founder Mindset:** Operate with ownership, customer realism, delivery discipline, and practical constraints.
-

Builder Projects

- **Jaganpro/sf-skills** : Co-built a public Salesforce skills library now adopted and consumed by Salesforce Product. Served as the second-largest contributor across a five-person core team.
 - **MFG-Auto-Cloud-Workshops** : Built a workshop application used at Dreamforce to help non-technical teams deliver Manufacturing and Automotive Cloud experiences programmatically.
 - **CrystalCodex** : Building a private local multi-agent wiki harness for reasoning, curation, project knowledge, reuse, and maintenance across active initiatives.
 - **Krys IT Solutions LLC**: Founded and operated a small business technology services company for eight years, delivering managed IT, web, and custom application solutions.
 - **Product Demos & Ecosystem Training**: Built demos, delivered workshops, and trained ecosystem technical teams on advanced Manufacturing Cloud and Automotive Cloud capabilities.
-

Experience Snapshot

Salesforce | Product, Industries, AI, and Solution Architecture Leadership

Apr 2019 - Present | Remote / Detroit, Michigan

Lead Solution Engineer → Product Manager → Senior Product Manager → Director / GenAI / Industry Solutions Architect

- Led product, GenAI, solution architecture, demo, workshop, and ecosystem enablement efforts across Manufacturing Cloud and Automotive Cloud.
- Translated manufacturing, automotive, supply chain, service, sales, and customer engagement workflows into product narratives and practical solution patterns.
- Created frameworks for turning customer problems into AI use cases, agent behaviors, data needs, actions, guardrails, and measurable outcomes.
- Built reusable demos, POCs, enablement assets, and workshop models that scaled product understanding beyond the core team.
- Partnered across product, engineering, field, customer, and ecosystem teams to move product capabilities from concept to adoption.

Krys IT Solutions LLC | Founder / Owner

8 years | Michigan

Founded and operated a small business technology services company providing managed IT, web, and custom application services for SMB and mid-market clients. Managed client relationships, service delivery, technical support, solution design, and business operations across the full customer lifecycle.

Toshiba Business | Software Solutions Senior Manager / Software Engineer / Various Roles

Oct 2006 - Apr 2019 | Michigan

Led software solutions and technology services for business customers, supporting application delivery, technical consulting, business process automation, managed services, and long-term customer relationships.

What's in Your Harness?

Codex • Claude Code • Cursor • Ghostty • Neovim • tmux

AI-assisted building, terminal-native workflows, and agentic development environments. I use these tools as part of a broader harness mindset: practical AI leverage, local-first workflows where appropriate, and systems that improve speed, clarity, and execution quality.

Publishing & Thought Leadership

- Medium author on AI-native product development, spec-driven development, builders, and the changing operating model for enterprise software.
 - Authored "Everyone Is Talking About Spec-Driven Development. Almost No One Is Ready For It."
 - Published Salesforce thought leadership on data foundations for modern manufacturing transformation.
 - Contributed to Salesforce and AWS thought leadership on connected vehicle and connected asset integration patterns.
-

Certifications(15+) & Education

- Agentforce Agentblazer Legend & AI Specialist
- Salesforce & Industry Allstar Awards
- various development & product / networking certs
- Associate's Degree, Computer Science, ITT Technical Institute - Troy
- Web Development, Washtenaw Community College
- Galloup School-Premiere Lutherie School
